                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an autofluorescing fusion protein (I, ABB08821-ABB08823) comprising: (i) a first autofluorescing protein (Ia); (ii) a segment containing a protease cleavage site; and (iii) at least one different autofluorescing protein (Ib). Essentially no fluorescent energy transfer occurs between (Ia) and (Ib). (I) is used for detecting and quantifying protease (or protease-inhibitory) activity in liquid samples or cells, particularly for screening-based optimisation (or generation) of biomolecules with proteolytic activity. (I) can be prepared in cellular or cell-free systems and makes possible intracellular analysis of protease activity. Preparation of (I) does not require regioneelective coupling of fluorophores to polypaptides and any selected protease cleavage site can be incorporated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New autofluorescent fusion protein, useful for determining protease and protease inhibiting activity, comprises two different proteins linked by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 506 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 6; Page 11; 35pp; German.

Bssentially no fluorescent energy transfer occurs between (Ia) and (Ib). (I) is used for detecting and quantifying protease (or protease-inhibitory) activity in liquid samples or cells, particularly for screening-based optimisation (or generation) of biomolecules with proteolytic activity. (I) can be prepared in cellular or cell-free systems and makes possible intracellular analysis of protease activity. Preparation of (I) does not require regioselective coupling of fluorophores to polypeptides and any selected protease cleavage site can be incorporated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New autofluorescent fusion protein, useful for determining protease and protease-inhibiting activity, comprises two different proteins linked by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drFP583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAR28833) in page 70-71 of the specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fluorescent proteins containing a mutation that reduces or eliminates i ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tsien RY, Zacharias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (TSIE/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11-SEP-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US2003170911-A1.

                                                                                                                                                                                                                                                                                                              The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fluorescent proteins containing a mutation that reduces or eliminates is ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        red

                                                                                                                                                                                                                                                                                      The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is biscosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       red
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                   The invention relates to interconverted mutants of chromoproteins (CP) or CC fluorescent proteins (FP) and nucleic acids encoding them. The mutant is CC derived from a Chidnarian species, preferably a non-bioluminescent CC chidarian species, and most preferably an Anthozoan species. The CC invention is based on the finding that although green fluorescent protein CC (GFP)-like chromoproteins and fluorescent proteins exhibit some degree of homology, there are certain positions (referred to as 148, 165, 167 and CC 203, numbering corresponds to GFP) that are occupied by noticeably CC different residues in the two types of proteins. Mutagenesis of the CC residues in these key positions in, for example, a fluorescent protein, CC chromoprotein activity on the fluorescent protein mutant, with recombinations being able to be converted into fluorescent proteins in a similar manner. The invention also relates to expression constructs, cc to those cells and host cell progeny comprising a nucleic acid of CC enromoprotein or fluorescent protein mutant; and antibodies specific for CC invention; the recombinant production of an interconverted CC interconverted mutant protein mutant; and antibodies specific for CC interconverted mutant protein sof the invention. The interconverted context are useful in any application that employs a chromoprotein or fluorescent protein mutants having chromoprotein cCC compositions, pharmaceuticals, cosmetics and living organisms. Proteins with chromoprotein activity are also useful as labels in biological canalyte detection activity are also useful as labels in biological and organisms. Proteins and protein cells and organisms. and and protein cells and organisms. And and protein cells and organisms. And and analyte detection activity are also useful as labels in any arganisms. And any the detection activity are also useful as labels in all arganisms. And any the detection activity are also activity and activity and any the detection activity are also activity and activity and activity are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nucleic acid encoding interconverted mutant of chromo-or fluorescent protein which are useful as biosensors, coloring ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fluorescence resonance energy transfer; FRET; blosensor; whole cell marker; second messenger detector; in vivo marker; fluorescence activated cell sorting; fluorescent timer; red fluorescent protein; DeRed; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chromoprotein; fluorescent protein; CP; FP; interconverted mutant; Cnidnarian; Anthozoan; labelling; colouring agents; pigment; analyte detection assay; selectable marker; sunscreen; selective f

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ១១១១១១១១១១១១១១១១១១១១១១<u>៩</u>៥
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC are also useful as sunscreens and selective filters. Chromoprotein CC mutants having fluorecent protein activity useful in fluorescence cresonance energy transfer (FRET) applications, as biosensors in CC prokaryotic and eukaryotic cells, as markers of whole cells to detect CC changes in multicellular reorganisation and migration, as second comessenger detectors, as in vivo markers in animals (e.g., transgenic clanges), in fluorescence activated cell sorting applications, in CC protease cleavage assays, and in assays to determine the phospholipid CC composition in biological membranes. Proteins with fluorescent protein CC fluorescent colour to another (e.g., green to real) is concomitant with CC the ageing of the protein and is useful for determination of the CC activation or deactivation of gene expression. The present sequence CC represents a Discosoma sp. red fluorescent protein DaRed mutant generated CC in an example of the invention. The present sequence is not shown in the specification, but was derived from the wild-type DaRed sequence (ADH34489) shown in Fig 1 and the information provided on page 42.

cc fluorescent proteins (FP) and nucleic acids encoding them. The mutant is converted mutants of chromoproteins (CP) or derived from a Chidarian species, preferably a non-bioluminescent condition is based on the finding that although green fillourescent protein (GPP)-like chromoproteins and fluorescent proteins explain some degree of homology, there are certain positions (referred to as 148, 165, 167 and CO 303) numbering corresponds to GPP) that are occupied by noticeably conditions in the two types of proteins exhibit some degree of the condition in the conditions in, for example, a fluorescent protein creations in a chromoprotein is therefore proposed to confer chromoprotein being able to be converted into fluorescent proteins in a circumpercein being able to be converted into fluorescent protein mutant, with converted manner. The invention also relates to expression constructs, call any other call progeny comprising a nucleic acid of the invention; the recombinant protein mutant; and antibodies specific for interconverted mutant protein activity are also useful as intromoprotein or fluorescent protein mutant; and antibodies specific for interconverted mutant protein activity are also useful as labels in biological analyte detection activity are also useful as labels in biological analyte detection, as in vivo markers in animals (e.g., the production of transpends cells and organisms), and carease clawage assays, as selectable markers of whole cells to detect changes in multicellular reorganisation and migration, as second compositions in also be used as fluorescent there, where the switch of one sensors and subcrition in biological membranes. Proteins with fluorescence composition in biological membranes. Proteins with fluorescence composition in biological membranes. Proteins with fluorescence of composition in biological membranes. Proteins with fluorescent protein cativity can also be used as fluorescent there, where the switch of one fluorescent protein and is useful for determination of the composition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
                                                       The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in protein and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. darPp583 (NPP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. darPp583 (NPP-6) wild-type protein shown as SEQ ID NO:8 (AAE28833) in page 70-71 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding a non-aggregating chromo- or fluorescent mutant of an aggregating Cnidarian chromo- or fluorescent protein or mutant for analyte detection assays or fluorescence activated cell sorting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fluorescent protein; chromoprotein; protease cleavage assay; filter; fluorescence activated cell sorting application; fluorescent timer; biosensor; fluorescence resonance energy transfer application; FRET; colouring agent; recombinant DNA application; analyte detection assay; sunscreen; second messenger detector; drFP583 protein; NFP-6; mutant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Discosoma sp. Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAE28919 standard; protein; 225

                                                                                                                                    The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                           The invention provides a nucleic acid encoding functional red fluorescent CC CC protein (II) that differs from the sequence of an Anthozoan red CC fluorescent protein by at least one amino acid substitution, and with CC different fluorescent properties. The red fluorescent protein of the CC invention can be expressed by standard recombinant methodology. (II) are CC used a fluorescent markers and FRET partners. It is used for identifying CC protein-protein interactions. (II) is also suitable for multiplexed CC fluorescent analysis and FRET-based applications using existing Aequorea CC fluorescent proteins. (II) has improved brightness, reduced spectral CC cross talk, and is rapidly and efficiently expressed in mammalian cells. CC The key mutations in the encoding nucleic acids provide improved folding, CC brightness, and create (II) with sharper, more defined excitation and CC brission peaks when expressed in mammalian cells. The present sequence CC represents the amino acid sequence of an improved synthetic mutant of an CC anthozoan fluorescent protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
This invention describes a novel method of site-specific DNA recombination in eukaryotic cells in vitro comprising using a bacteriophage Pl Cre recombinase that lacks heterologous protein-created comming the recombinase that lacks heterologous protein-created comming site-specific DNA recombination also contains a reporter system for detecting site-specific DNA recombination in eukaryotic cells.

CR Recombination with Cre recombinase lacking heterologous protein-created cells, in vivo or in vitro, e.g. for partial inactivation creates a chromosomal translocation. The created cells in vivo or in vitro, e.g. for partial inactivation creates a chromosomal translocation. The created cells when added to culture medium and catalyzes recombination created cells when added to culture medium and catalyzes recombination created cells when added to culture medium and catalyzes recombination created cells introduced into the cell, so its effect is immediate but short-lived, limiting cytotoxic effects; eliminating the risk of non-creatific integration of DNA into the genome and providing quick results.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 224;
The present invention describes a chimeric protein comprising at least one signal protein that has a trafficking signal targeting to a subcellular organelle and at least one proteolytic cleavage site for a protease. The chimeric protein is constructed, so that: (a) the trafficking signals of all the signal proteins are inactivated by linking the proteolytic site or a signal masking protein through the proteolytic site or a signal masking protein through the proteolytic site to the N-or C- terminus of the signal proteins, and so the chimeric protein is present in cytosol; (b) the trafficking signal of at least one signal protein is activated when the proteolytic cleavage site is cleaved by the protease, and as a result at least one fragment protein that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 chimeric protein; proteolytic cleave

Label signal in the cell is altered depending on the cleavage by the protease. Also described: (1) a recombinant gene comprising a nucleic acid sequence encoding the chimeric protein which is constructed to express the chimeric protein in a cell; (2) a cell transformed with the recombinant gene or vector; (3) analysing the activity of a protease in vivo; (4) screening protease inhibitors in vivo; (5) a system for detecting a protease inhibitors in protein grocease activity in a cell; (7) a vector comprising the nucleic acid; (8) a kit for detecting a protease inside a cell comprising the chimeric protein or the vector; (9) detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside the cell or tissue. The present sequence represents a fusion protein, which is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

New chimeric protein, useful for detecting cell or tissue. protease inhibitors inside the

Example 3; SEQ ID ğ 76; 214pp; English.

The present invention describes a chimeric protein comprising at least come signal protein that has a trafficking signal targeting to a composition of signal protein that has a trafficking signal targeting to a composition of the protease. The chimeric protein is constructed, so that: (a) the content of the proteolytic site or a signal masking protein are inactivated by linking the proteinlytic constructed, so that: (a) the content to the Norce terminus of the signal proteins are inactivated by linking the proteinlytic constructed, so the chimeric content in the protein is activated when the proteins, and so the chimeric protein is protein is activated when the proteins, and so the chimeric concludes the activated when the protein that constructed to a subcellular conganalle; and (c) the chimeric protein is a transported to a subcellular conganalle; and (c) the chimeric protein is a transported to a subcellular conganalle; and the position and intensity distribution of the cleavage by the protease. Also described: (1) a recombinant gene comprising a concluded acid sequence encoding the chimeric protein which is constructed to express the chimeric protein in a cell; (2) a cell transformed with the recombinant gene or vector; (3) analysing the activity of a protease invivo; (4) sorrening protease inhibitors in vivo; (5) a system for congrising the chimeric protein or the vector; (c) a cell; (7) a vector comprising the nucleic acid; (8) a kit for detecting a protease inside a cell comprising the chimeric protein or the vector; (c) detecting a protease inside a cell or tissue, and (10) detecting a constant invention protein, which is used in the exemplification of the crease inhibitors in vivo; The chimeric protein is useful for detecting constant a fusion protein, which is used in the exemplification of the crease inhibitors inside the cell or tissue. The present sequence present invention.

Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in protein and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drrp583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drrp583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAE28833) in page 70-71 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Discosoma

                                                                                                                                                                                                                                                                                             The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABM00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                                                                                                                                                                                                                                                                             The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fluorescent proteins containing a mutation that reduces or eliminates is ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                                                                                                                                                                                                                                                                                                                        The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (YRFP). (I) are used to express red fluorescent protein (RFP) in enkaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of the yeast optimised RFP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       especially yeast or plants.

                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2003-802418/75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US2003170911-A1

                                                                                                                                                                                                               The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABM00918)
                                                                                                                                                                                                                                                                                                                                                                                                               Fluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      문
                                                                       Matches
                                                                                                                                        containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Discosoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
fluorescent proteins (FP) and nucleic acids encoding them. The mutant is derived from a chidnarian species, preferably a non-bioluminescent chidarian species, and most preferably an Anthozoan species. The invention is based on the finding that although green fluorescent protein (GFP)-like chromoproteins and fluorescent proteins exhibit some degree of homology, there are certain positions (referred to as 148, 165, 167 and 203; numbering corresponds to GFP) that are occupied by noticeably different residues in the two types of proteins. Mutagenesis of the residues in these key positions in, for example, a fluorescent protein, to those found in a chromoprotein is therefore proposed to confer chromoprotein activity on the fluorescent protein mutant, with chromoproteins being able to be converted into fluorescent proteins in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chromoprotein; fluorescent protein; CP; FP; interconverted mutant; Cnidnarian; Anthozoan; labelling; colouring agents; pigment; analyte detection assay; selectable marker; sunscreen; selective filter;
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to interconverted mutants of chromoproteins (CP)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc vectors, host cells and host cell progeny comprising a nucleic acid of che invention; the recombinant production of an interconverted content or fluorescent protein mutant; and antibodies specific for interconverted mutant proteins of the invention. The interconverted content protein mutant; and antibodies specific for content or the protein mutant; and antibodies specific for content or useful in any application that employs a chromoprotein or content protein mutants having chromoprotein compositions, pharmaceuticals, cosmetics and living organisms. Proteins compositions, pharmaceuticals, cosmetics and living organisms. Proteins compositions (e.g. the production of transgenic cells and organisms) and compositions (e.g. the production of transgenic cells and organisms), and care also useful as subscreens and selective filters. Chromoprotein composition as subscreens and selective filters. Chromoprotein composition and eukaryotic cells, as markers of whole cells to detect changes in multicellular reorganisation and migration, as second composition in biological membranes. Proteins with fluorescent protein composition in biological membranes. Proteins with fluorescent protein composition in biological membranes. Proteins with fluorescent protein composition or deactivation of suseful for determination of the activity can also be used as fluorescent timers, where the switch of one cativity can also be used as fluorescent timers, where the switch of one cativity can also be used as fluorescent timers, where the switch of one cativity can also be used as fluorescent timers, where the switch of one cativity can also be used as fluorescent timers, where the switch of one cativity can also be used as fluorescent protein barded mutant generated in an example of the invention. The present sequence is not shown in the specification, but was derived from the wild-type DaRed mutant genera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drFP583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAE28833) in page 70-71 of the specification

```
The invention relates to a fluorescent timer protein having an emission CC spectrum that changes over time after synthesis from a first wavelength CC to a second wavelength. The fluorescent timer proteins are useful in CC monitoring the activity of a promoter, determining the age of a protein, CC identifying an agent that modulates the activity of a promoter and in CC enriching a population of cells comprising a fluorescent timer protein. CC The fluorescent timer proteins are also useful for assessing gene CC expression during development of a multicellular organism or during CC cellular differentiation, in response to a drug or other inducer of CC promoter activity, as a reporter to serve as a read-out of promoter CC aspects of the activity of a regulatory element or translocation, CC protein trafficking, or protein stability, to investigate temporal CC visualisation of newly synthesised proteins of accumulated proteins, and CC visualisation of newly synthesised proteins and accumulated proteins, and CC visualisation of newly synthesised proteins and accumulated proteins, and CC techniques are employed, as detectable labels, as selectable markers, as biosensors in prokaryotic and eukaryotic cells, in protease cleavage CC assays, and as second messenger detectors. The nucleic acids can be used CC didications in cell lines. The present sequence is Discosoma sp. ES fluorescent protein derived from humanised wild-type Anthozoa protein CC dirps by substituting Val to Ala at 105 and Ser to Thr at 197
                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "Wild type Val substituted with Misc-difference 197
                                                                                                                                                                                                                                                                                                                                                                       Sequence 225

                                                                                 to oligomerize. The present invention describes fluorescent proteins derived from naturally occurring green or red fluorescent proteins and provides a fusion protein that comprises a non-oligomerizing fluorescent protein linked to at least one protein of interest. As such, these fusion proteins can be used in methods and compositions to determine the pH of a sample, or whether the sample contains an enzyme, molecule or agent that regulates the activity of an expression control sequence. Furthermore, they may be used to identify a specific interaction of molecules, such that they are useful for improving or developing new assays in the field of molecular biology. This polypeptide sequence is the Discosoma sp. red fluorescent protein (RFP) mutant of the invention. NOTE: This sequence is not given in the invention but it is derived from SeqID 12 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel non-oligomerizing fluorescent protein. Specifically, it refers to the presence of at least one mutation in the fluorescent protein that reduces or eliminates the ability of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New non-oligomerizing fluorescent protein containing at least one mutation that reduces or eliminates the ability of the protein to oligomerize, useful for making better and new assays for molecular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Lo
The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABM00918)
                                                                                                                                                                        Fluorescent proteins containing a mutation that reduces or eliminates ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                   The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify ...
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Discosoma sp

The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced
                                                                                                                                                                                                                                                                                                                               New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, usefin molecular biology, e.g. in immunoassays or in tracking protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present sequence is Discosoma sp. Note: This sequence is not shown i sequence is constructed based on E shown in page 30-31 (ABW00918)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this

Fluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP) mutant. Note: This sequence is not shown in the specification, however this sequence is constructed based on Discosoma sp. wild-type RFP protein shown in page 30-31 (ABW00918)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chromoprotein; fluorescent protein; CP; FP; interconverted mutant; Cnidnarian; Anthozoan; labelling; colouring agents; pigment; analyte detection assay; selectable marker; sunscreen; selective filter; fluorescence resonance energy transfer; FRET; biosensor; whole cell marker; second messenger detector; in vivo marker; fluorescence activated cell sorting; fluorescent timer; red fluorescent protein; DsRed; mutant; mutein.

                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                          ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC analyte detection assays as selectable markers in recombinant DNA
CC applications (e.g. the production of transgenic cells and organisms), and
CC are also useful as sunscreens and selective filters. Chromoprotein
CC mutants having fluorecent protein activity useful in fluorescence
CC resonance energy transfer (FRET) applications, as biosensors in
CC protearyotic and eukaryotic cells, as markers of whole cells to detect
CC changes in multicellular reorganisation and migration, as second
CC messenger detectors, as in vivo markers in animals (e.g., transgenic
CC animals), in fluorescence activated cell sorting applications, in
CC protease cleavage assays and in assays to determine the phospholipid
CC composition in biological membranes. Proteins with fluorescent protein
CC activity can also be used as fluorescent timers, where the switch of one
CC activity can also be used as fluorescent timers, where the switch of one
CC the ageing of the protein and is useful for determination of the
CC the ageing of the protein and is useful for determination of the
CC cativation or deactivation of gene expression. The present sequence
CC represents a Discosoma sp. red fluorescent protein bared mutant generated
CC in an example of the invention. The present sequence is not shown in the
CC protein and the invention of the wild-type bared sequence.
CC protein the protein and the information protein bared as
                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             to those found in a chromoprotein is therefore proposed to confer chromoprotein activity on the fluorescent protein mutant, with chromoproteins being able to be converted into fluorescent proteins in a similar manner. The invention also relates to expression constructs, vectors, host cells and host cell progeny comprising a nucleic acid of the invention; the recombinant production of an interconverted chromoprotein or fluorescent protein mutant; and antibodies specific for interconverted mutant proteins of the invention. The interconverted mutants are useful in any application that employs a chromoprotein or fluorescent protein. Fluorectin protein mutants having chromoprotein activity can useful as colouring agents in, for example, food compositions, pharmaceuticals, cosmetics and living organisms. Proteins with chromoprotein activity are also useful as labels in biological than the content of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chidarian species, and most preferably an Anthozoan species. The invention is based on the finding that although green fluorecent protein (GFP)-like chromoproteins and fluorescent proteins exhibit some degree of homology, there are certain positions (referred to as 148, 165, 167 and 203; numbering corresponds to GFP) that are occupied by noticeably different residues in the two types of proteins. Mutagenesis of the residues in these key positions in, for example, a fluorescent protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 225 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to interconverted mutants of chromoproteins (CP) or fluorescent proteins (FP) and nucleic acids encoding them. The mutant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acid encoding interconverted mutant of chromo-or fluorescent protein which are useful as biosensors, coloring agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bulina ME,

protein (I) comprising a 241 residue amino acid sequence (see ABP5678, 51), with one or more point mutations at amino acid sequence (see ABP5678, K164, or M183. Also described: (1) a fusion protein comprising (I); (2) an isolated nucleic acid encoding (I); (3) a vector comprising the nucleic acid of (2); (4) a host cell comprising the vector; (5) a retroviral cDNA expression library comprising the nucleic acid of (2), or encoding (I); and (6) methods of making a fluorescent variant. The Discosoma red fluorescent proteins are useful for functional screens as a reporter for gene transcription (e.g. as a fusion protein), for target characterisation and localisation of fusion proteins, or for scaffolds for protein and peptide libraries. The fluorescent proteins can also be used as selectable markers or reporter molecules for a variety of bioassays, including methods that use fluorescence activated cell sorting (FACS) as a selection mechanism. The method of directed protein evolution
                                                                                                                                                                                                                                                                                            New Discosoma red fluorescent protein, useful for functional screens as a reporter for gene transcription, for target characterization and localization of fusion proteins, or for scaffolds for protein and peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-MAY-2002; 2002WO-US015968

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               is useful for obtaining improved variants of red fluorescent protein. The variants of Discosoma red fluorescent protein have greatly improved brightness, expression, and/or folding kinetics as compared to wild type or a codon optimised variant. The present sequence represents a mammalian codon optimised Discosoma red fluorescent protein, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fluorescent protein; chromoprotein; protease cleavage assay; filter; fluorescence activated cell sorting application; fluorescent timer; biosensor; fluorescence resonance energy transfer application; FRET; colouring agent; recombinant DNA application; analyte detection assay; sunscreen; second messenger detector; drFP583 protein; NFP-6; mutant;

```

chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sumscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drFP583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAE28833) in page 70-71 of the specification The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are 225 B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to nucleic acid molecules encoding non-aggregating Chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drrP583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drrP583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAEZ8833) in page 70-71 of the specification
                                                                                  Pluorescent protein; chromoprotein; protease cleavage assay; filter; fluorescence activated cell sorting application; fluorescent timer; biosensor; fluorescence resonance energy transfer application; FRET; colouring agent; recombinant DNA application; analyte detection assay;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid encoding a of an aggregating Chidarian analyte detection assays or

                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant protein of the invention. Note: This sequence is not shown in the specification, but is derived from Discosoma sp. drFP583 (NFP-6) wild-type protein shown as SEQ ID NO:8 (AAE28833) in page 70-71 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid encoding a of an aggregating Cnidarian analyte detection assays or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Discosoma
